

Simple Data Types

The [Data Models](#) for this API will specify data types for each of the elements. Following is a list of all Data Types returned and consumed by this API.

Data Type	Description
integer	Signed or unsigned integer value.
decimal	Signed or unsigned numeric value which may or may not contain a decimal representation.
string	String data.
boolean	true or false
date	Date without time. Please refer to the section regarding Date Formatting .
datetime	Date with time. Please refer to the section regarding Date Formatting .
enumeration	Predefined set of values represented as strings. The allowed values will be listed in the documentation in which the enumeration is used. Some common enumerations are listed here .
object	Objects will be specified as the name of the object in the documentation. The object description will follow the documentation for model in which the object is referenced.
